                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                     3
                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amportrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                           Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                       and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

The specification describes SENP1 and SENP2 polypeptides. The SENP1 gene is found in chromosome 12q13.1. SENP1 is found in the nucleolus, SENP3 is found in the nucleolus, and SENP3 is found in both locations. SENP polypeptides are sentron-specific proteases that remove sentrin from some sentrinised peptides, but do not affect proteins modified by ubiquitin or NEDDB. SENP polypeptides are used to identify specific and anti-viral agents such as herpes simplex-1 or cytomegalovirus. SENP polypeptides are used for studying the role of sentrinisation in the biological function of PML, a tumour suppressor implicated in development of acute promyelocytic leukaemia. Fragments of SENP polynucleotides are used as hybridisation probes and amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360

```
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                           Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemotactic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel human secreted proteins which are encoded by polynucleotides obtained from fetal brain, adult skin, adult brain, adult theart, adult thywus and adult acrta coNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, hematopoiesis regulating cettivity, itssue growth activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumor invasion suppressor activity, and tumor inhibition activity. The polynucleotides are also stated to be useful for gene therapy.

AZ43777-Z43808 represent the polynucleotides described in the invention which encode the proteins represented in AAV50905-Y50947.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5

```
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as lazhedimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, cutilisation of the activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and who was a disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                              Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AMOUS 492-AAD05564 represent cDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode.

AAE0174 AAE01763 represent human secreted protein fragments or variants.

CC The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

CC pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 22 genes, based on the itssues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, the diagnosis or treatment of proliferative disorders, diseases of the immune system AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, diabetes, asthman, skin disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitative disorders, schizophrenia, asthma, skin disorders, and indiabetes, and crimed isorders, and indications. The proteins can also be used to aid wound healing and epithalial cell proteins can also be used to aid wound healing and epithalial cell proteins can also be used to aid wound healing and epithalial coll partners, and in chemotaxis, and can be used as a food additive or professor of modify storage properties. Antibodies specific for a professor of the invention can be used in alleviating symptons associated
angiogenic disorder; kidney disorder; gastrointestinal disorder; allergy; pregnancy-related disorder; endocrine disorder; infection; wound healing; cell culture; chemotaxis; vulnerary; binding partner identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 radioimmunoassay or enzyme linked immunosorbent assay (ELISA).
The present sequence represents a human secreted protein-encoding cDNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                      "Human secreted protein precursor"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SM;

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polyucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen.

CC recombinant vectors and host cells comprising human ovarian antigen of ovarian antigens and present of ovarian polyuncleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, copylyostic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), chlood-related disorders (e.g., anaemia), cardiovascular disorders, and urinary system disorders, neurological disorders, gastrointestinal disorders and urinary system disorders, ovarian antigen polypeptides and collabore.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    further be used for game therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the obypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, dury targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the

ADD05492-AAD05564 represent CDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the protein stagements of protein fragments or variants. AAE01744-AAE016762 represent human secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted protein in a manner of the protein or gene therapy. Pathological conditions can be diagnosed by determining the presence of amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the can include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of abordars, endies and include developing products for the diagnosis or treatment of abordars, and include developing products for the diagnosis or treatment of abordars, and include developing products (e.g., Alzheimer's disease, Albs, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Sthan disorders, and infections. The proteins can also be used to aid wound the allow of an anintain organs before transplantation, for supporting cell culture of primary tissues, to respendent tissues, to identify their contact ligands or binding partners, and in chemotaxis, and can be used to a protein of the invention of the prodict of a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassavs e.g., radioimmunoassay or enzyme linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in diagnostic immunoassays e.g., radioimmunoassay or enzyme lin
immunosorbent assay (ELISA). The present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The polynucleotide sequences given in AAC59566 to AAC59614 encode the human secreted proteins given in AAB3429 to AAB3447. AAB3436 to AAB34437 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Example of activities include: neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; and antibacterial. The polynucleotides can be used for the detection of various disorders such as cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The secreted proteins can be used to

ABE01744-ABE01763 represent human secreted proteins show their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted protein is and their genes are useful for preventing. The secreted protein in a sample or by determining the presence of mount of the new protein in a sample or by determining the presence of another of the new genes. Specific uses are described for each of the 22 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, DIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, cardiovascular disorders, angiogenic disorders, kidney disorders, and infections. The proteins can also be used to aid wound healthing and epithelial cell proliferation, to prevent skin aging due to subtract the contract of an example of the subtraction of an example of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of the subtraction of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.

                                                                                                                                                                                                                                                               4,
                                                                                                                  The present invention describes a DNA construct comprising a transcriptional regulatory sequence linked to the gene of interest wher the regulatory sequence linked human enkaryotic initiation factor 4A1 (eIF4A1) gene promoter. This can be used in the production of DNA vaccines and gene therapy, both of which can be used in the prevention and treatment of diseases such as cystic fibrosis, parkinson's disease, cancer, hepatitis B and C, HIV, tuberculosis, HPV, HSV, multiple sclerosis, Alzheimer's disease and asthmal It can also be used in

The invention relates to novel genes (AA193926-AA197963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy as usceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of ovarian cancer. The compositions comprise one or more ovarian tumour toboteins, their associated polynucleotides, or immunogenic portions of the proteins. The ovarian tumour polynucleotides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumour protein. They are also useful for inhibiting the development of cancer in protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumour DNA or protein by incubating isolated T-cells allowing them to proliferate, for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutual species and for preparing other genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25349
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises compositions used for the therapy and diagnosis

                            The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnoshing prognosis is related to factors similar to that for N-myc and TrkA genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      996 GGACCTTGTATGGACAGAACTGGCTCAATGACCAGGTGATGAACATGTATGGAGACCTGG 1055

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 8, Al Sequence 8, Al Sequence 8, Al Sequence 8, Al Sequence 17, Sequence 17,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4, Application US/08282581
Patent No. 5670349
GENERAL INFORMATION:
APPLICANT: Cramer, Carole L.
APPLICANT: Welssenborn, Deborah L.
TITLE OF INVENTION: HAG2 PROMOTER EXPRESSION SYSTEM AND
TITLE OF INVENTION: POST-HARVEST PRODUCTION OF GENE PRODUCTS
TITLE OF INVENTION: IN PLANTS AND PLANT CELL CULTURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 1890;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TITLE OF INVENTION: PROCEDURES AND REGULATORY DNA SEQUENCES; FOR GENETICALLY ENGINEERING DISEASE RESISTANCE AND OTHER INDUCTBLE TRAITS IN PLANTS; NUMBER OF SEQUENCES: 9
CURRENT APPLICATION DATA:
PILING DATE: 13-JUN-1989
                                                                                                                                                                                       Length 480;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          23; Indels
                                                                                                                                                                                                                                   Indels

Sequence 781, Application US/09969373

Patent No. US20020133852A1

GENERAL INFORMATION:

APPLICANT: Effertz.

TITLE OF INVENTION: Soybean SSRs and Methods of Genotyping

TITLE REFERENCE: 38-10(52679)A

CURRENT APPLICATION NUMBER: US/09/969,373

CURRENT FILING DATE: 2001-10-05

PRIOR FILING DATE: 2001-01-05

PRIOR FILING DATE: 2001-01-05

PRIOR FILING DATE: 2001-01-13

PRIOR FILING DATE: 2001-01-13

PRIOR FILING DATE: 2001-01-13

NUMBER OF SEQ ID NOS: 4593

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       with a NotI-oligo(dT) primer. Five prime end enriched, with a NotI-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was constructed by Life Technologies. /note="Organ: eps: Yector: pT713-Pac (Pharmacia) with a modified polylinker: Site_l: EcoR I; Site_2: Not I; ul=-bm0 is a cDNA library containing the following ul=-E-DM0 is a cDNA library containing the following tissue(s): lens. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The
